

RV SERIES INFRA RED MULTI-BEAM BARRIER SYSTEM

This system is the latest addition to the renowned range of RV products offering exceptional value for money without compromising quality.

Distinguished by its streamlined black acrylic and aluminium construction, its advanced design offers freedom of choice of internal equipment for self-assembly.

Suitable for internal or external environments, its powder organic paint finish and IP54 rating provides year round protection.

The free-standing dual sided version, complete with integral base, offers 360° viewing with the wall mount single-sided version offering 180° viewing. Access to both versions can be monitored via the integral anti-tamper switches.

Standing at a height of 1.8 metres, up to five synchronised MB or CMB-series dual beams can be fitted, effectively providing a ten beam per zone configuration.

The MB and CMB units are provided in 'chassis only' format for installation within the housing. However, existing beam sets can be retrofitted by removing their covers and back-plates.

For extreme environmental conditions, heaters, thermostats and fog discrimination modules are available.

MULTI-BEAM BARRIER HOUSING

Equipment for self-assembly.

MB-series: high security including synchronisation link.

CMB-series: digitally coded synchronisation (no link).

IRV-150: complies to BS4737 Pt. 3 Sect.3.12.
